Ignacio Córdova, Data Analyst

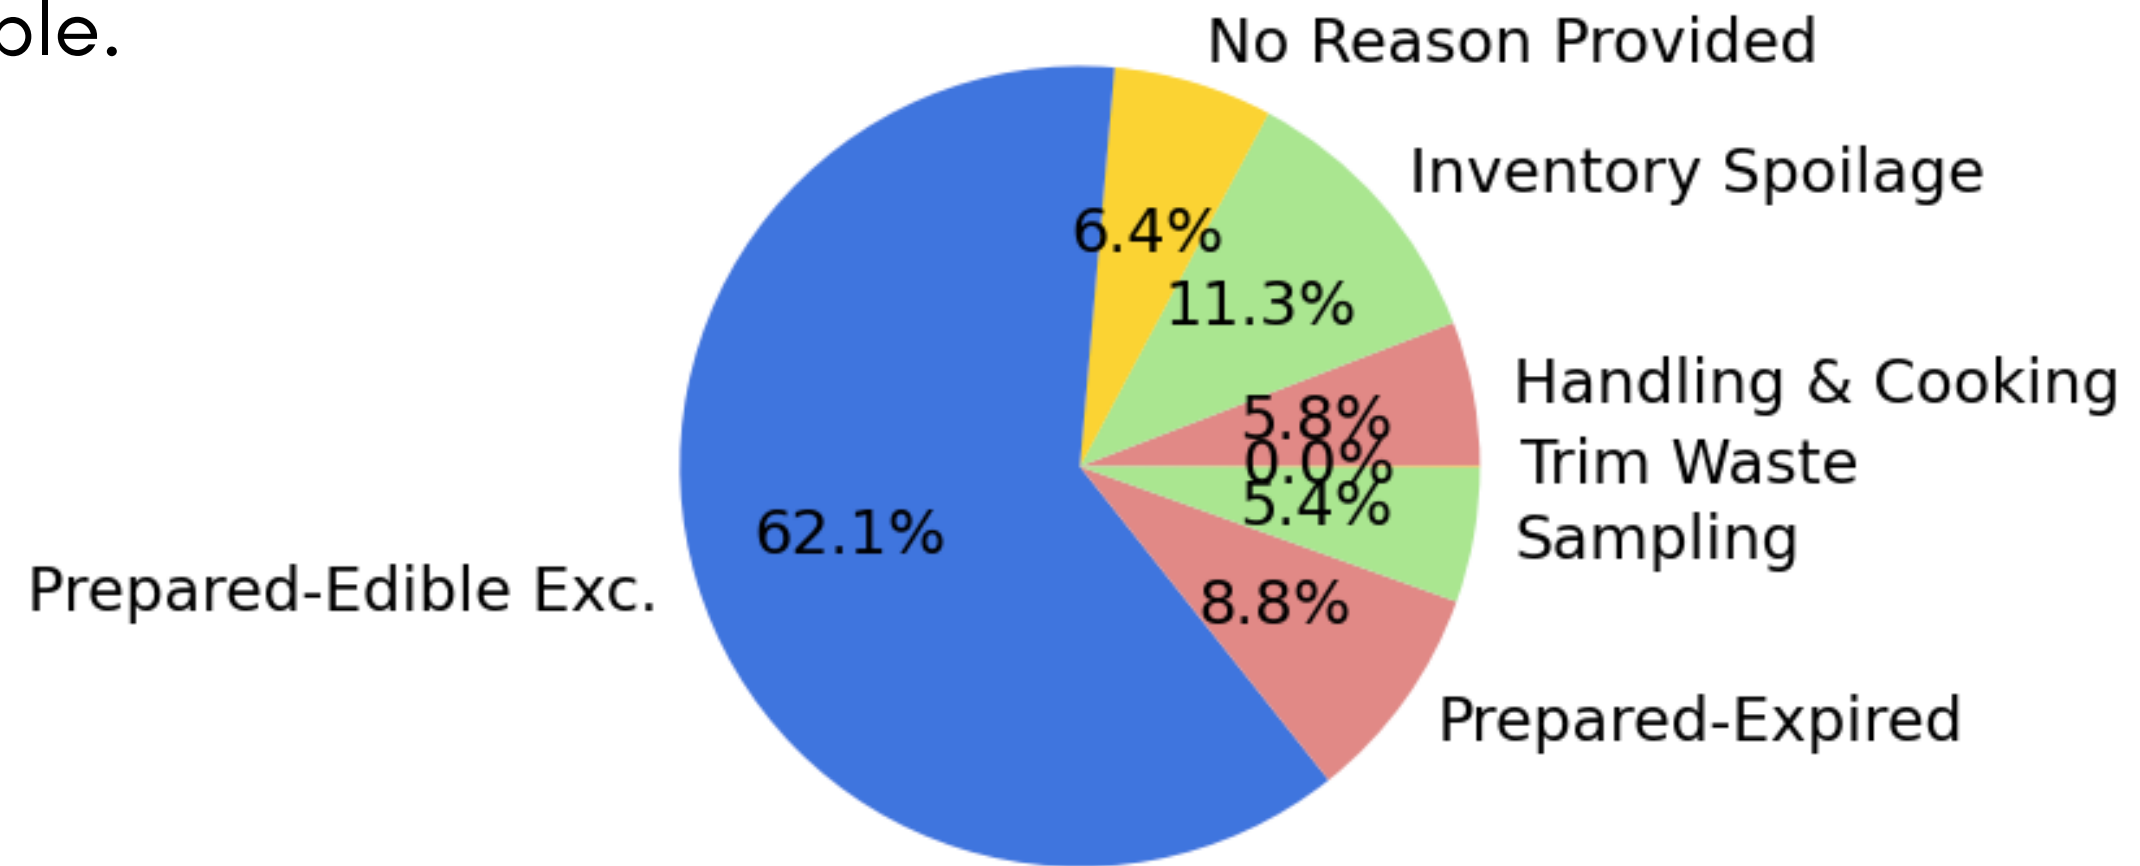

Exploratory Data Analysis

- Type "B" kitchens produce **x5** times more waste.

Exploratory Data Analysis

- Waste is **62%** Prepared-Edible.

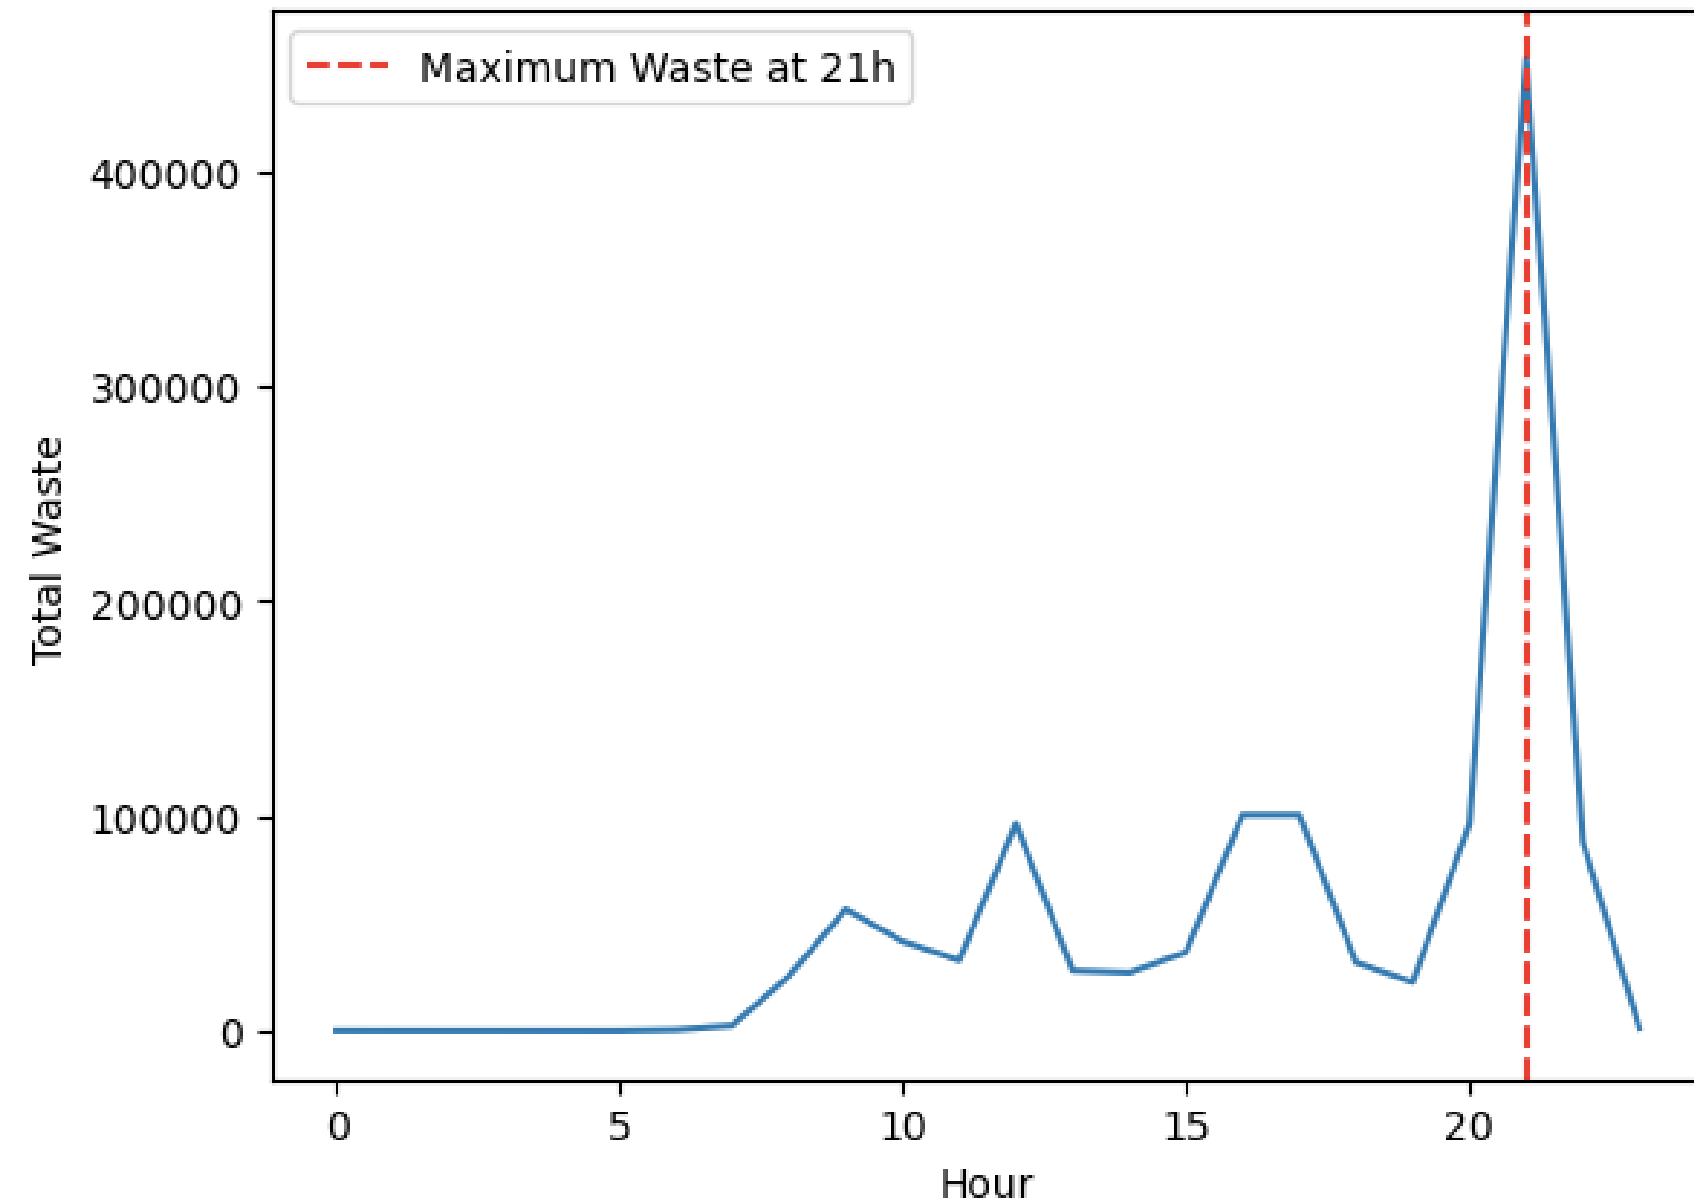

Exploratory Data Analysis

- **+50%** of waste is cheap (snacks, bread, pastries...).

Exploratory Data Analysis

- **Inventory optimization** is crucial.

Key insights

- Type "B" kitchens produce **x5** times more waste.
- **+50%** of waste is cheap (snacks, bread...).
- Waste is **62%** Prepared/Edible.
- **Inventory optimization** is crucial.
- The most **economic value** is wasted through **meat, main courses** and **vegs**.

Total waste

Call for papers: Cross journal collection on Nutrition, Physical Activity and Aging

Nutrition Journal is calling for papers as part of a cross journal collection themed on [Nutrition, Physical Activity and Aging](#). Participating journals include [Nutrition Journal](#), [Nutrition & Metabolism](#), [European Review of Aging and Physical Activity](#), [Journal of Activity, Sedentary and Sleep Behaviors](#) and [BMC Geriatrics](#). The submission deadline is 31 Aug 2022.

Announcing the launch of In Review

Featured article: Dietary inflammatory index and cardiovascular disease risk in Hispanic women from the Women's Health Initiative

Chronic inflammation plays a key role in the pathophysiology of cardiovascular disease (CVD), in

Novedad
MILANESA DE POLLO
Milanesa de pollo con mezcla de judías y patatas fritas
5,99 €

FISH AND CHIPS
Fish and chips, pescado rebozado con patatas fritas y salsa tártara
6,99 €

Novedad
FILETE DE SALMÓN
Filete de salmón con cuscús, vegetales a la parrilla y yogur.
7,99 €

CODILLO ASADO
Codillo asado de cerdo en su jugo con guarnición de patatas fritas.
9,99 €

[Physical Activity](#), [Journal of Activity, Sedentary and Sleep Behaviors](#) and [BMC Geriatrics](#). The submission deadline is 31 Aug 2022.

...to value

- Managers and stakeholders care about money, not weight.

Money \propto weight

- Allows us to reduce waste achieving maximum economic return.

Usecase #1: waste and value loss reduction

- Allow managers and stakeholders to make data driven decisions.
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

Usecase #2: anomaly detection

- Share with the team the most problematic
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

Usecase #1: waste and value loss reduction

Sum of waste by food_category

Sum of value by food_category

Sum of waste by Year, Quarter, Month and Day

Sum of value by Day and food_category

Usecase #1: waste and value loss reduction

Business impact

- Dashboard allows managers to **optimize inventory** and reduce waste.
- Focusing on **top 3** food categories fights the **+30%** of waste.
- Focusing on **top 3 value waste** fights the **+50%** of value loss.
- Focusing on value (instead of only weight) shows immediate results to stakeholders.
- Dashboard tackles **locations** and all **3** kitchen types in parallel.

Usecase #1: waste and value loss reduction

- Allow managers and stakeholders to make data driven decisions.
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

Usecase #2: anomaly detection

- Share with the team the most problematic
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

Usecase #1: waste and value loss reduction

- Allow managers and stakeholders to make data driven decisions.
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

Usecase #2: anomaly detection

- Share with the team the most problematic
- We can't fight what we can't see.
- Raise awareness of employees with weekly dashboards.

What if our data is not fully accurate?

Using isolation forest, we found **anomalies** throughout the data!

Automatically-classified anomalies

There are also anomalies in human entries

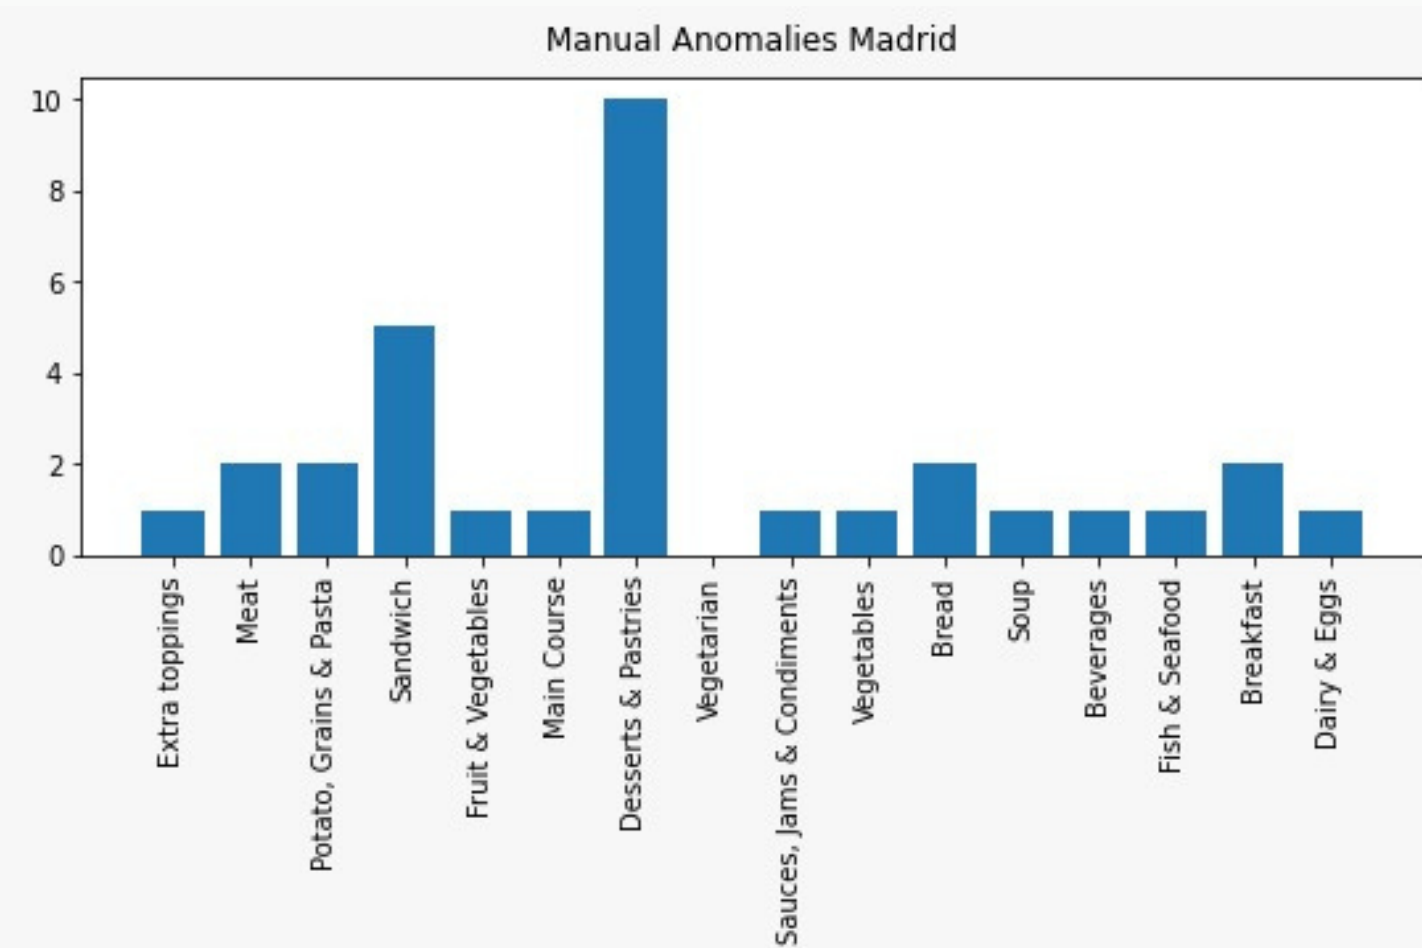

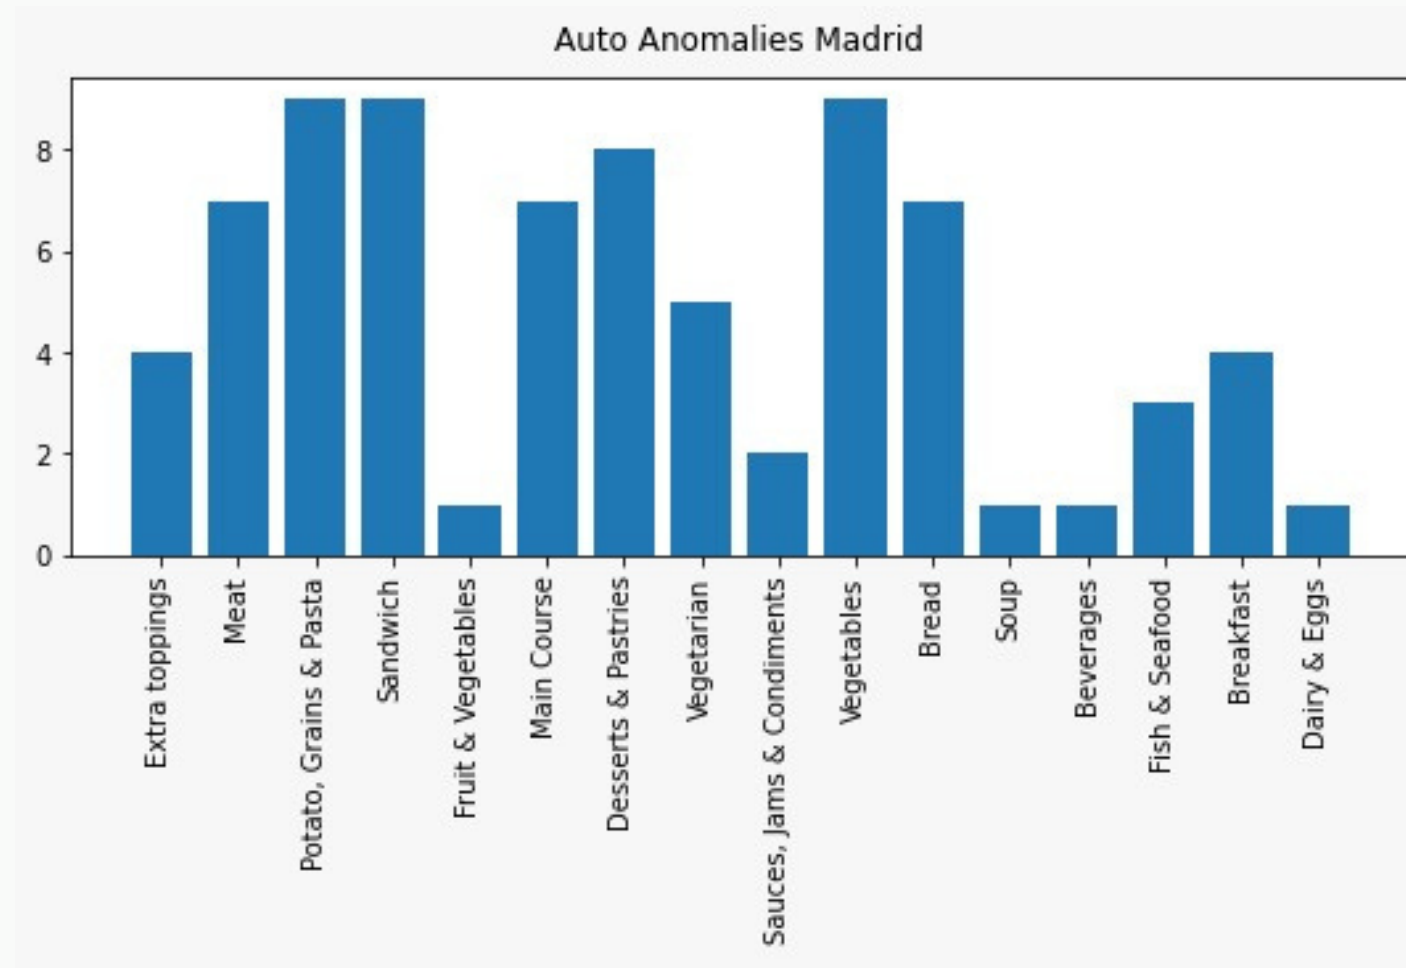

Are those **mistakes** from the operators of the kitchen?

**We found 158 anomalies in the
measures of Madrid and 126 in
Barcelona**

Going deeper in Madrid...

We analyzed the number of anomalies for all the food types

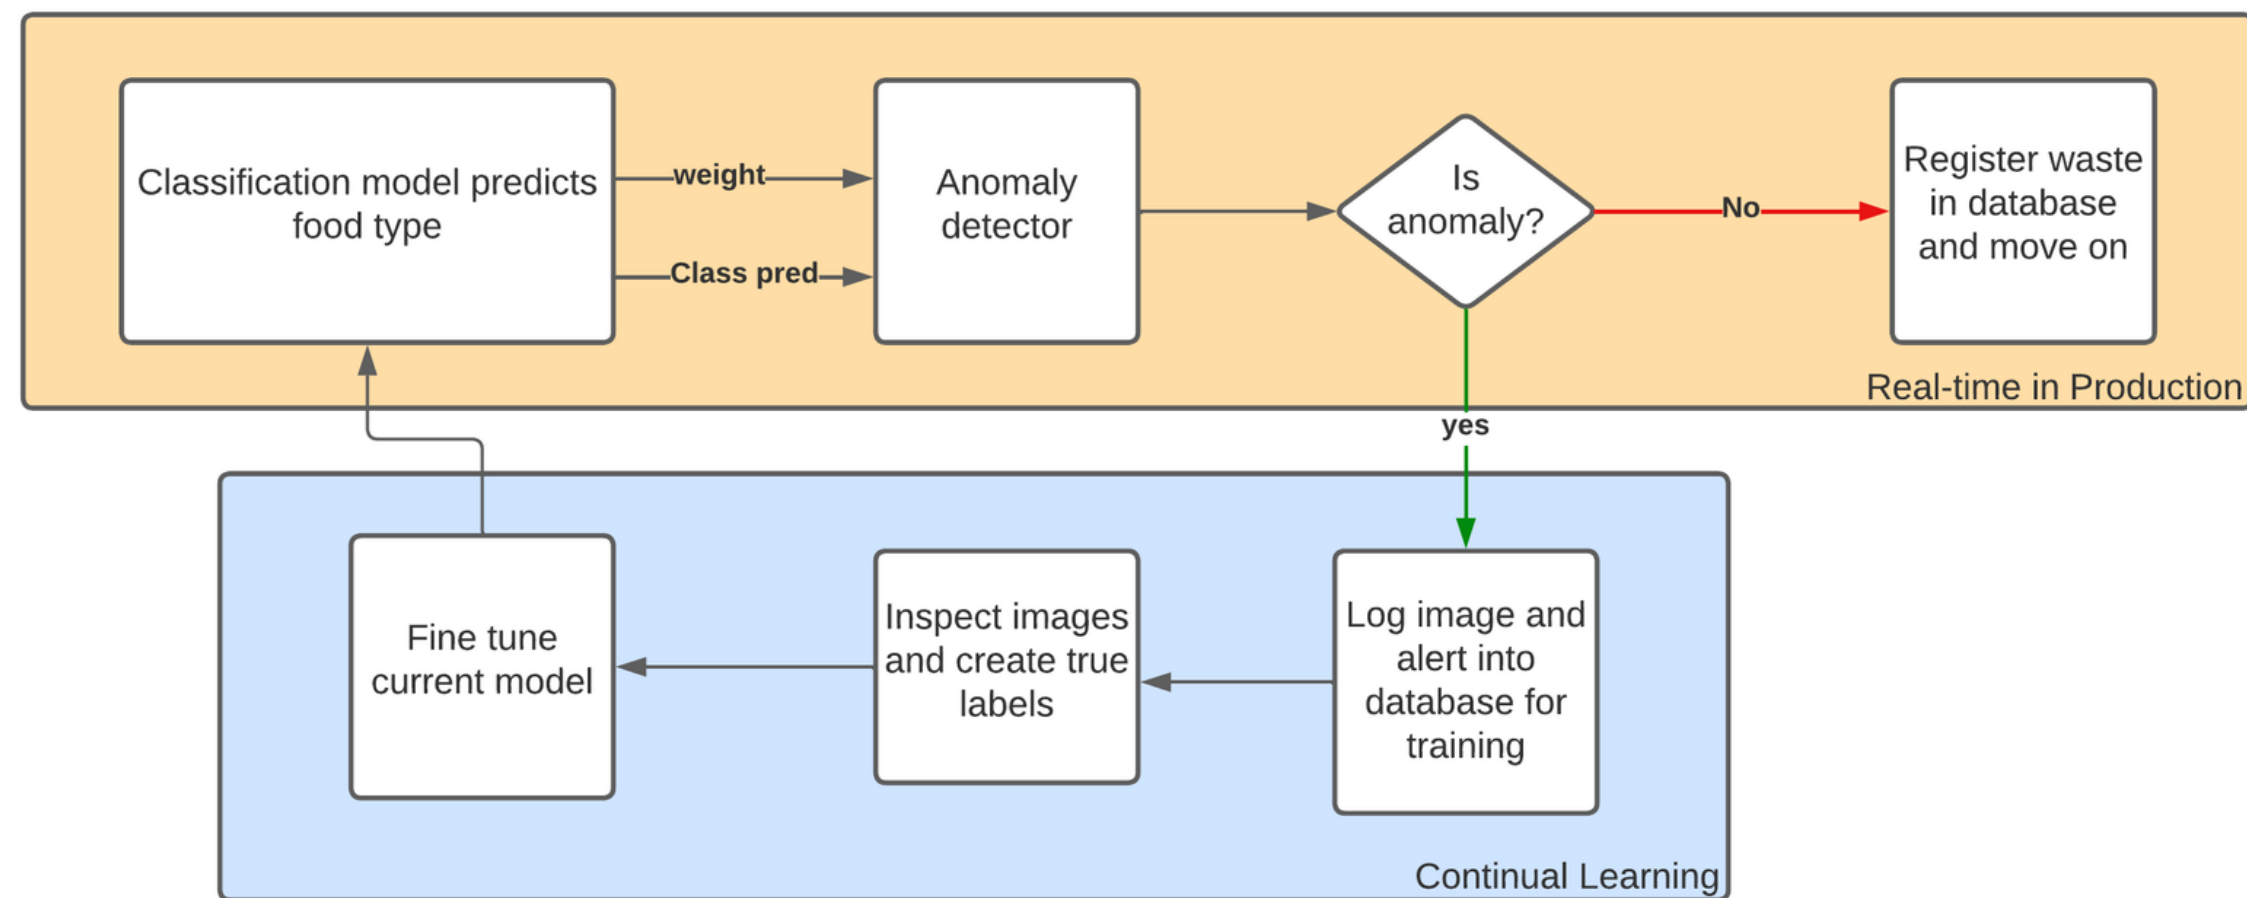

How can we improve the workflow?

- We can alert operators when there is an anomaly so they can re-try waste measurement and classification
- The anomaly data can be used to improve the visual classification model.

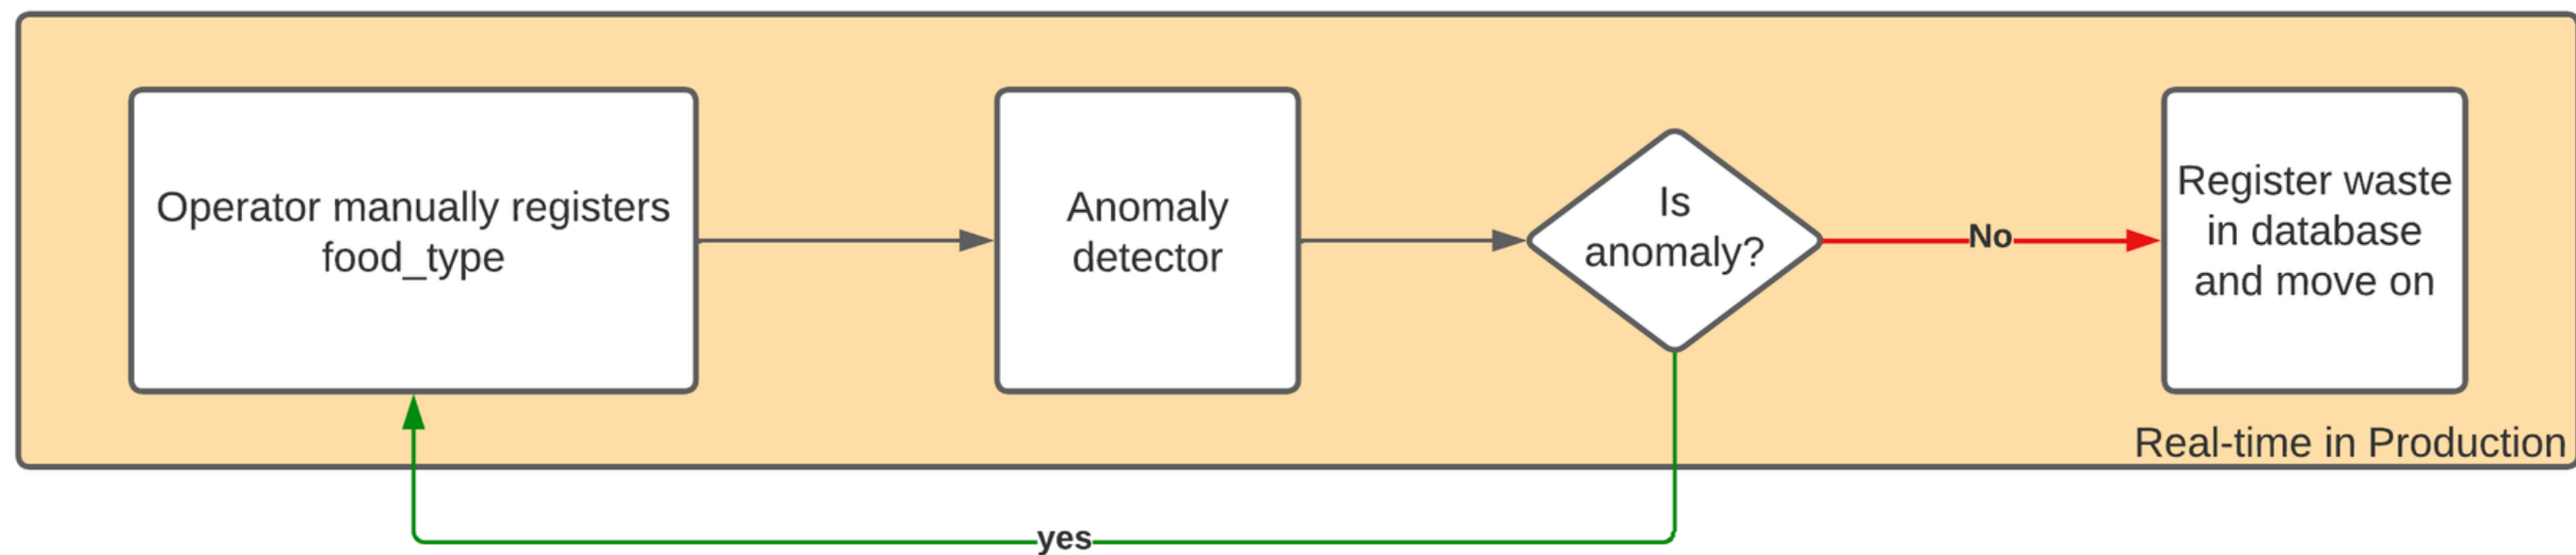

Our proposal!

Continual learning for the classification model

Our proposal!

Prompt operators to retry when the measure is an anomaly

What is the benefit?

Orange means manual input

- Better model, less human error.
- Increased efficiency
- Increased data quality that leads to better insights.
- Better insights means better waste management

Visit Data: Forecasting of March 2023

Methodology

1. Exploratory Data Analysis

- *Two data distributions*
- *Closed days*

2. Component analysis of the time series

- *Trend, Seasonality & noise*
- *Thursday, Friday and Saturday top days*

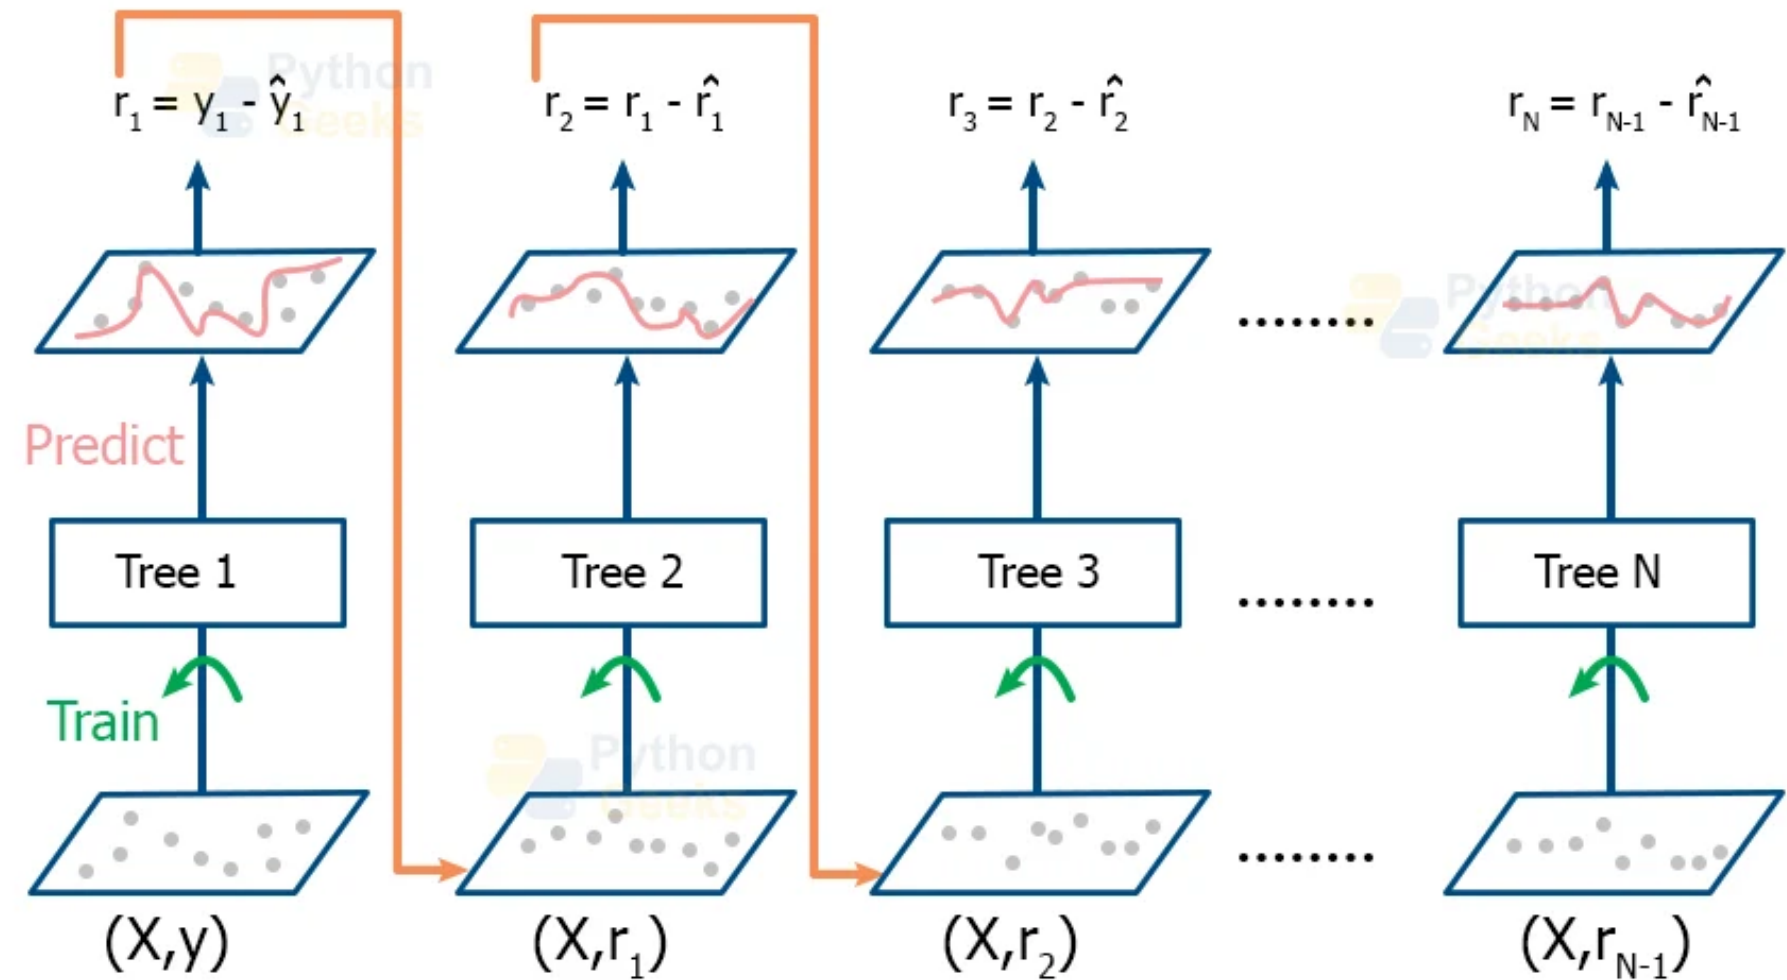

Methodology

3. Model selection

- *SARIMAX*
- *Random Forest*

★ ***Gradient Boosting***

Working of Gradient Boosting Algorithm

Methodology

4. Hyperparameter optimisation

- *Grid Search => Backtesting with refit and increasing training size*
- *Check over fitting => February 2023 as test data*

★ Hyperparameter found:

+ Lags => 7

+ N_estimators => 100

+ Max_depth => 3

Methodology

5. Kaggle submission

- *Root mean square error (RMSE): **2.27***

**But wait... What is this
actually for?**

How this makes you money?

Better understanding of how many visitors will have next week

Better stock provisioning

Better human capital needs

How this makes you money?

Further challenges

- Improve model accuracy on top days and holidays
- Discounts and marketing strategies based on the visits forecasts
